

Rope Rigging Instructor Workshop

Professional Development Series - Part 1
for Rope Access and Rescue Practitioners and Instructors

Highpoint Access & Rescue are conducting a rope rigging workshop in November 2009. This workshop forms part one of the three part Highpoint professional development series for rope rigging Instructors. Part one of the series is designed to

advance the skills and knowledge of the rope Practitioner and Instructor alike. Throughout this workshop participants will be able to witness first hand the testing of equipment and techniques commonly used within the rope access and rope rescue industries.

In depth investigation into:

- Personal fall protection
- Belay systems for rescue loads
- Anchoring systems
- Load factors for directional pulleys
- Rope grab devices and techniques
- Stretcher rigging
- Implications of rope stretch and fall factor
- Pulleys and mechanical advantage
- Artificial high directionals

Practical application:

- Rope offsets
- Highlines
- Advanced knotcraft
- Stretcher handling techniques
- Team based rescues
